Union Street/Mary Lane Study Area Resident

Dear Resident:

The City would like to take this opportunity to update you on the stormwater mitigation efforts in your area. Staff has identified a feasible project which would drain the stormwater from the intersection of Mary Lane and Union Street to the east to the existing stormwater detention basin on the adjacent property east of the homes along Mary Lane. A new storm sewer would be installed between the homes at 413 Mary Lane and 415 Mary Lane. A picture showing the conceptual improvement is attached.

Should you have any questions or feedback regarding this conceptual improvement, please contact us, as we would like to obtain any of your feedback prior to proceeding with a request for funding for future engineering and construction.

The City's website will continue to be updated as projects move forward. You can find your area at *www.crystallake.org, click "Residents" then "Stormwater Solutions" then "Union Street Study Area."* The website also contains background information and identifies resources that you may find useful.

In Crystal Lake, supporting residents' quality of life while protecting the environment, is a community priority. Stormwater management is a cooperative endeavor between residents, neighborhood associations, the City, and other government entities. Please take this opportunity to contact us by **February 23, 2018** at stormwatersolutions@crystallake.org or (815) 356-3611 to be certain that your perspective and feedback is given consideration in plans for this neighborhood improvement.

Thank you for your time and attention to this important matter.

Sincerely,

Michael Magnuson, P.E.
Director of Public Works

CONCEPTUAL IMPROVEMENT
