Updated Lead Service Line Replacement Plan

March 28, 2025

Prepared By:

The City of Crystal Lake Department of
Public Works & Engineering

Table of Contents

Section	Page Number
Purpose Statement	2
The number of service lines connected to the distribution system of the community water supply	3
The total number and location of suspected lead service lines connected to the distribution system of the community water supply	3
The total number and location of known lead service lines connected to the distribution system of the community water supply	3
The total number and locations of lead service lines connected to the distribution system of the community water supply that have been replaced since 2020	3
Proposed lead service line replacement schedule that includes one year, 5-year, 10-year, 15-year, 20-year, 25-year, 30-year goals	4
An analysis of costs and financing options for replacing the lead service lines connected to the community water supply's distribution system	5
A detailed accounting of costs associated with replacing lead service lines and galvanized lines requiring replacement	5
Measures to address affordability and prevent service shut-offs for customers or ratepayers	5
Consideration of different scenarios for structuring payments between the utility and its customers over time	5
Plan for prioritizing high risk facilities as well as high-risk areas identified	6
Measures for how the community water supply will inform the public of the plan and provide opportunity for public comment	8
Measures to encourage diversity in hiring in the workforce required to implement the plan as identified under subsection (n)	11
Procedure for conducting full lead service line replacement	12
Procedure for informing customers before a lead service line replacement and flushing directions to remove particulate lead form service lines and premise plumbing	12

Section 1: Purpose Statement

The Lead Service Line Replacement and Notification Act (LSLRNA) (Public Act 102-0613) mandates that water system owners and operators, such as the City of Crystal Lake (the City), create and maintain a record of lead service lines, and furthermore develop a comprehensive plan for replacing lead service lines. The City submitted the initial plan on April 15th, 2024 regarding the replacement of all lead service lines in the City. The City will continue to resubmit an updated plan by April 15th of each year until the final plan is submitted by April 15th, 2027. This document serves as the updated comprehensive plan for replacing lead service lines that are connected to the City's water supply distribution system. This plan is a preliminary proposal with provisions that are subject to change until the final plan is submitted to the IEPA for approval. The final plan shall account for all known and suspected lead service lines documented in the final material inventory.

The Lead Service Line Replacement Plan Checklist has been completed and provided as a supplement to the Lead Service Line Replacement Plan to ensure that all sections have been included as required by 415 ILCS 5/17.12 of the Environmental Protection Act. See *Appendix A* for the completed Lead Service Line Replacement Plan Checklist.

Section 2: Lead Service Line Material Inventory

The City of Crystal Lake **(IEPA Facility #IL1110150)** has prepared a completed material inventory to assist in prioritizing and strategizing the replacement of known and suspected lead service lines within the City's water distribution system.

In accordance with the LSLRNA, the City of Crystal Lake identified:

(1) The total number of service lines connected to the community water supply's distribution system.
(2) The materials of construction of each service line connected to the community water supply's distribution system.
(3) The number of suspected lead service lines that were newly identified in the material inventory for the community water supply after the community water supply last submitted a service line inventory to the Agency.
(4) The number of suspected or known lead service lines that were replaced after the community water supply last submitted a service line inventory to the Agency, and the material of the service line that replaced each lead service line.

Lead Service Line Replacement and Notification Act requirements:

(1) Prioritize the inspection of high-risk areas identified.
(2) Review historical documents to determine service line material.
(3) Visually inspect service lines and documented material when doing maintenance.
(4) Identify any time period service lines would have been connected to the distribution system and were primarily lead service lines.
(5) Discuss service line repairs and installation with other employees, contractors, plumbers, and other workers who worked on service lines connected to the City of Crystal Lake water distribution system.

Table 1 summarizes the total quantities identified in the completed material inventory. See *Appendix G* for the complete Lead Service Line Inventory.

Table 1
Material Inventory - Summarized Total Quantities

Total Number of Service Lines	13,787
Total Number of Suspected Lead Service Lines	1,109
Total Number of Known Lead Service Lines	517
Total Number of Lead Service Lines that have been replaced since 2020	111

See *Appendix F* for the map of lead service lines and the selected replacement areas identified. The sequential replacement of lead service lines will begin in area A14 and make progress southwest through the City.

Section 3: Lead Service Line Replacement Schedule

The City has produced a lead service line replacement program detailing progress toward plan goals following the 17-year replacement timeline required by the LSLRNA. The City intends to replace all lead service lines, at an annual rate of 6% of the amount described in the final inventory, with a timeline of up to 17 years for completion.

The City shall submit a report detailing progress toward plan goals to the IEPA for its review after the Agency has approved the final replacement plan. The report shall be submitted annually for the first 10 years, and every 3 years thereafter until all lead service lines have been replaced. The published reports will include:

(1) The number of lead service lines replaced and the average cost of lead service line replacement.

(2) Progress toward meeting hiring requirements as described in subsection (n) and subsection (o) of the LSLRNA.

(3) The percent of customers electing a waiver offered, as described in subsections (ii) and (jj) of the LSLRNA, among those customers receiving a request or notification to perform a lead service line replacement.

(4) The method or methods used by the City of Crystal Lake to finance lead service line replacement.

Table 2 summarizes the proposed lead service line replacement timeline that includes 1-year, 5-year, 10-year, 15-year, and 17-year goals.

Table 2
Lead Service Line Replacement Timeline

Timeline	Annual Replacement Rate (6% Annual Replacement Rate)	Approximate Number of Planned Lead Service Lines Replaced	Estimated Cost to Replace
Year 1	6%	98	$1,372,000
Year 2 - 5	24%	391	$5,474,000
Year 6 - 10	30%	489	$6,846,000
Year 11 - 15	30%	489	$6,846,000
Year 16 - 17	10%	162	$2,268,000
TOTAL	**100%**	**1,629**	**$22,806,000**

Costs Associated with Replacing Lead Service Lines

Table 3 summarizes the past unit costs for items associated with the replacement of lead service lines.

Table 3
Approximate Costs Associated with Replacing Lead Service Lines

Costs Associated with Lead Service Lines		
Item	**Unit**	**Unit Price**
Water Service Connection at B-Box	Each	$4,000.00
Water Service Pipe Install	Linear Feet	$20.00
Water Service Connection at Water Meter	Each	$4,000.00
Furnished Water Meter	Each	$500.00
Water Meter Installation	Each	$600.00
Water Distribution Pipe	Linear Feet	$500.00
Non-Special, Non-Hazardous Waste Disposal	Per Ton	$75.00
Restoration – Topsoil, Seed, and Blanket	Square Yards	$25.00
Sidewalk Removal and Replacement 5”	Square Feet	$10.00
Driveway Removal and Replacement - Res	Square Yards	$60.00
Driveway Removal and Replacement - Comm	Square Yards	$120.00
Sanitary Sewer Service Repair	Linear Feet	$100.00
Drain Repair	Linear Feet	$100.00

Total replacement costs are estimated in the range of $12,000 to $16,000. Per *Table 2*, the City estimates a total of **$22,806,000** for total completion. The City anticipates accomplishing the program with a combination of local, State, and Federal funds.

Measures to Address Affordability

The City previously evaluated several framework options for affordability. After careful consideration, the City selected option one, a grant program to assist customers in the replacement of lead water service lines.

The following framework options were evaluated for affordability in the initial plan:

(1) A grant program to assist customers in the replacement of lead water service lines. This grant program will be designed to assist approved property owners with reimbursement approximately 85% to 100% of the total cost of the full lead service line replacement. Applications will be reviewed in the order that they are received; however, preference will be given to high-risk facilities.

(2) The cost of the full lead line replacement is capped at a fixed amount for the property owner (e.g. $3,000). The City will pay the remaining cost of the lead service line replacement.

(3) The resident will pay fully for the cost of the private side of the lead service line replacement; The City pays fully for the cost of the public side of the lead service line replacement. Partial lead service line replacements are not allowed (LSLRNA).

Section 5: Prioritizing High-Risk Facilities

High-risk facilities are categorized as preschools, schools, day care centers, day care homes, group day care homes, parks, playgrounds, hospitals, and clinics. The City will continually monitor each year for high-risk facilities with lead service lines, and galvanized service lines requiring replacement. If the City identifies lead service lines or galvanized service lines requiring replacement at a high-risk facility during continual monitoring, the facility will be prioritized. The City intends to individually notify all identified high-risk facilities in need of replacement through targeted notification.

Table 5 lists the high-risk facilities connected to the City's water supply distribution system. The table identifies the service addresses and line material as identified in the Lead Service Line Inventory. ***At this time, no high-risk facilities have been identified with lead service lines, or galvanized service lines requiring replacement.***

Section 6: Informing the Public

The City intends to implement a multifaceted outreach strategy to inform the public of the lead service line replacement plan, as well as providing public education to effectively communicate to the residents of Crystal Lake. The City's intended public education efforts should provide residents with clear information about how lead gets into drinking water and the risks of lead in drinking water. This outreach strategy intends to utilize targeted mailing, public meetings, newsletters, social media postings, and website updates to reach customers.

The City of Crystal Lake website includes a Drinking Water and Lead webpage (City of Crystal Lake Drinking Water & Lead Webpage) providing the most current lead service line material inventory to provide a transparent look into the efforts to replace lead service lines within the City. See *Figure 1* for preview of the City of Crystal Lake Drinking Water and Lead webpage. The webpage also provides a link to a GIS map (City of Crystal Lake Lead Service Inventory Map GIS) where Crystal Lake property owners may enter their address to access information regarding the material for both the publically owned and privately owned sections of the water service line pipe. The GIS map is updated routinely with data from the most current lead service line material inventory. See *Figures 2, 3*, and *4* for preview of the GIS map.

Section 7: Measures to Encourage Diversity in Hiring

The City shall follow Chapter 102 (the Crystal Lake Procurement Code) of the City Code of Ordinances regarding procurement. Chapter 102 provides procedures for fair and equitable processes for purchasing by the City.

If State or Federal funding is secured for Lead Service Line Replacement, the City will abide by the goals of the LSLRNA with respect to encouraging diversity in hiring. These goals will be included in the project specifications and bid documents for any State or Federally funded lead service line replacement project.

Section 8: Lead Service Line Replacement Procedures

The City shall follow the provisions in 40 CFR Part 141 Subpart 1 (Control of Lead and Copper) as well as the Lead Service Line Replacement and Notification Act when conducting the replacement of lead service lines.

Procedure for Conducting a Lead Service Line Replacement

- No later than 45 days prior to planned service line replacement and water main construction projects, the City will notify customers in writing of the health effects of lead and the extent of planned work. See *Appendix B* for the *Lead Notification 45 Day Notice, and see Appendix C for the Lead Information and Health Effects Notice.*
- Two weeks prior to the planned lead service line replacement, the City will provide a notification of replacement explaining that consumers may experience a temporary increase of lead levels in their drinking water due to the replacement, information about the health effects of lead, and actions consumers can take to minimize their exposure to lead in drinking water. See *Appendix D* for the *Lead Notification Two Week Notice*.
- The City will provide information about service line flushing before the replaced service line is returned to service. *See Appendix E* for the *Important Flushing Information Notice*.
- The day before replacement of the service line, the City will provide the customer with a water filter pitcher device certified to NSF/ANSI Standard 53, instructions for use of the filter, and information about the health effects of lead. The water pitcher filter device that the City currently provides to the customer is the ZeroWater 6-Cup 5-Stage Water Filter Pitcher (Model: ZP-006).

Procedure for Flushing Directions after Lead Service Line Replacement

- The City will inform the costumer that the service line should be flushed once the line is reconnected to the main and prior to use by the customer.
- Plumbers must flush the water inside the home, closest to where the service line enters the structure, immediately following a lead service line replacement.
- Cold water should be run for at least 30 minutes at full flow after removing the faucet aerator. The purpose of this flush is to remove any debris resulting from the replacement process that might contain lead.
- Customers, or the plumbers, should also flush the interior plumbing after a lead service line replacement. Beginning in the lowest level of the home, they should remove all faucet aerators and fully open the cold water taps throughout the home, letting the water run for at least 30 minutes at the last tap. Then they should turn off each tap starting with the taps in the highest level of the home.

Appendix B

Lead Notification 45 Day Notice

CITY OF
Crystal Lake
ILLINOIS

Lead Informational Notice

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Dear Water Customer: Date:_____

The City's water system will soon begin a water line maintenance and/or construction project that may affect the lead content of your potable water supply. This work may result in sediment, possibly containing lead in the building's water. Lead, a metal found in natural deposits, is harmful to human health, especially young children and pregnant women. The most common exposure to lead is swallowing or breathing in lead paint chips and dust. However, lead in drinking water can also be a source of lead exposure. In the past, lead was used in some water service lines and household plumbing materials. Lead in water usually occurs through corrosion of plumbing products containing lead; however, disruption (construction or maintenance) of lead service lines may also temporarily increase lead levels in the water supply. This disruption may be sometimes caused by water main maintenance/replacement. As of June 19, 1986, new or replaced water service lines and new household plumbing materials could not contain more than 8% lead. Lead content was further reduced on January 4, 2014. Plumbing materials must now be certified as "lead-free" to be used (weighted average of wetted surface cannot be more than 0.25% lead).

This notice is for informational purposes only. While it's not known for certain whether or not this particular construction project will adversely affect the lead (if present) plumbing in and outside your home, below describes some information about the project and some preventative measures you can take to help reduce the amount of lead in drinking water.

Project Start Date:_____ **Project expected to be completed by:**_____

Project location and description: _____

What you can do to reduce lead exposure in drinking water during this construction project:

Run your water to flush out lead.

- If you do not have a lead service line, running the water for 1-2 minutes at the kitchen tap should clear the lead from your household plumbing to the kitchen tap. Once you have done this, fill a container with water and store it in the refrigerator for drinking, cooking and preparing baby formula throughout the day.
- If you do have a lead service line, flushing times can vary based on the length of your lead service line and the plumbing configuration in your home. The length of lead service lines varies considerably. Flushing for at least 3-5 minutes is recommended during and after the project.

Use cold water for drinking, cooking and preparing baby formula. Do not cook with or drink water from the hot water tap; lead dissolves more easily into hot water. Do not use water from the hot water tap to make baby formula.

Do not boil water to remove lead. Boiling water will not reduce lead.

Remove and regularly clean faucet aerators. The small screen can trap sediments containing lead.

Look for alternative sources or treatment of water. You may want to consider purchasing bottled water or use a water filter that is certified to remove "total lead".

Purchase lead-free faucets and plumbing components.

Remove the entire lead service line.

Test your water for lead. The City does not do lead testing, but we have provided a list of nearby certified laboratories provides laboratory water testing. Laboratories will send you the bottles for sample collection. Please note that we are not affiliated with the laboratories and they will charge you a fee.

- If test results indicate a lead level above 15 ug/L, bottled water should be used by pregnant women, breast-feeding women, young children and formula-fed infants.

Appendix C

Lead Information and Health Effects Notice

What Are The Health Effects of Lead?

Lead can cause serious health problems if too much enters your body from drinking water or other sources. It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body. The greatest risk of lead exposure is to infants (particularly if they drink formula prepared with water containing elevated levels of lead), young children, and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones, and it can be released later in life. During pregnancy, the child receives lead from the mother's bones, which may affect brain development.

What Are The Sources of Lead?

The primary sources of lead exposure for most children are deteriorating lead-based paint, lead contaminated dust, and lead-contaminated residential soil. Exposure to lead is a significant health concern, especially for young children and infants whose growing bodies tend to absorb more lead than the average adult. **Infants that drink formula prepared with lead-contaminated water are at a greater risk because of the large volume of water they drink relative to their body size**. Lead is rarely found in source water, but enters tap water through corrosion of plumbing materials. Homes built before 1986 are more likely to have lead pipes, fixtures and solder.

What Can I Do To Reduce Exposure to Lead in Drinking Water?

If the level of lead found in your drinking water is above 15 ppb or if you are concerned about the lead levels at your location, there are several things you can do:

- ***Run your water to flush out lead.*** If water hasn't been used for several hours, run water from your kitchen tap or whatever tap you use for drinking and cooking for **at least 3 minutes** and it becomes cold or reaches a steady temperature before using it for drinking or cooking. This will help flush lead-containing water from the pipes. In order to conserve water, you can fill multiple containers after flushing for drinking, cooking, and preparing baby formula.

- ***Bottled drinking water should be used by pregnant women, breast-feeding women, young children, and formula-fed infants at homes where lead has been detected at levels greater than 15 ppb.***

- ***Use cold water for drinking, cooking, and preparing baby formula.*** **Do not** cook with or drink water from the hot water tap; lead dissolves more easily into hot water. **Do not** use water from the hot water tap to make baby formula.

- ***Do not boil water to remove lead.*** Boiling water will not reduce lead.

- ***Look for alternative sources or treatment of water.***

- ***Test your water for lead.*** Call us 815-356-3614 to find out how to get your water tested for lead.

- ***Identify if your plumbing fixtures contain lead.*** New brass faucets, fittings, and valves, including those advertised as "lead-free," may contribute lead to drinking water. As of June 19, 1986, new or replaced water serviced lines and new household plumbing materials could not contain more than 8% lead. Lead content was further reduced on January 4, 2014, when plumbing materials must now be certified as "lead-free" to be used (weighted average of wetted surface cannot be more than 0.25% lead). Consumers should be aware of this when choosing fixtures and take appropriate precautions.

Appendix D

Lead Notification Two Week Notice

CITY OF
Crystal Lake
ILLINOIS

Date:_____

Address: _____

Dear Resident:

Beginning in two weeks, lead service lines will be replaced on your street. The lead water service line is connected to your property will be replaced. This disturbance may result in sediment, possibly containing lead into the building's water. Please see the attached information sheet about the lead in drinking water.

As a precaution, we are providing you a home water filter (NSF/ANSI 53 certified to remove lead) for your use at faucets used for drinking and cooking.

Upon completion of your lead service line replacement, your plumbing will need to be flushed before consumption. See attached flushing information.

The City of Crystal Lake will also provide replacement filters until the completion of this phase of the project. If you are in need of replacement filters or have any questions please contact us at (815) 356-3614.

Sincerely,

Sean Park
Public Water Supply Superintendent
City of Crystal Lake

Appendix E

Important Flushing Information Notice

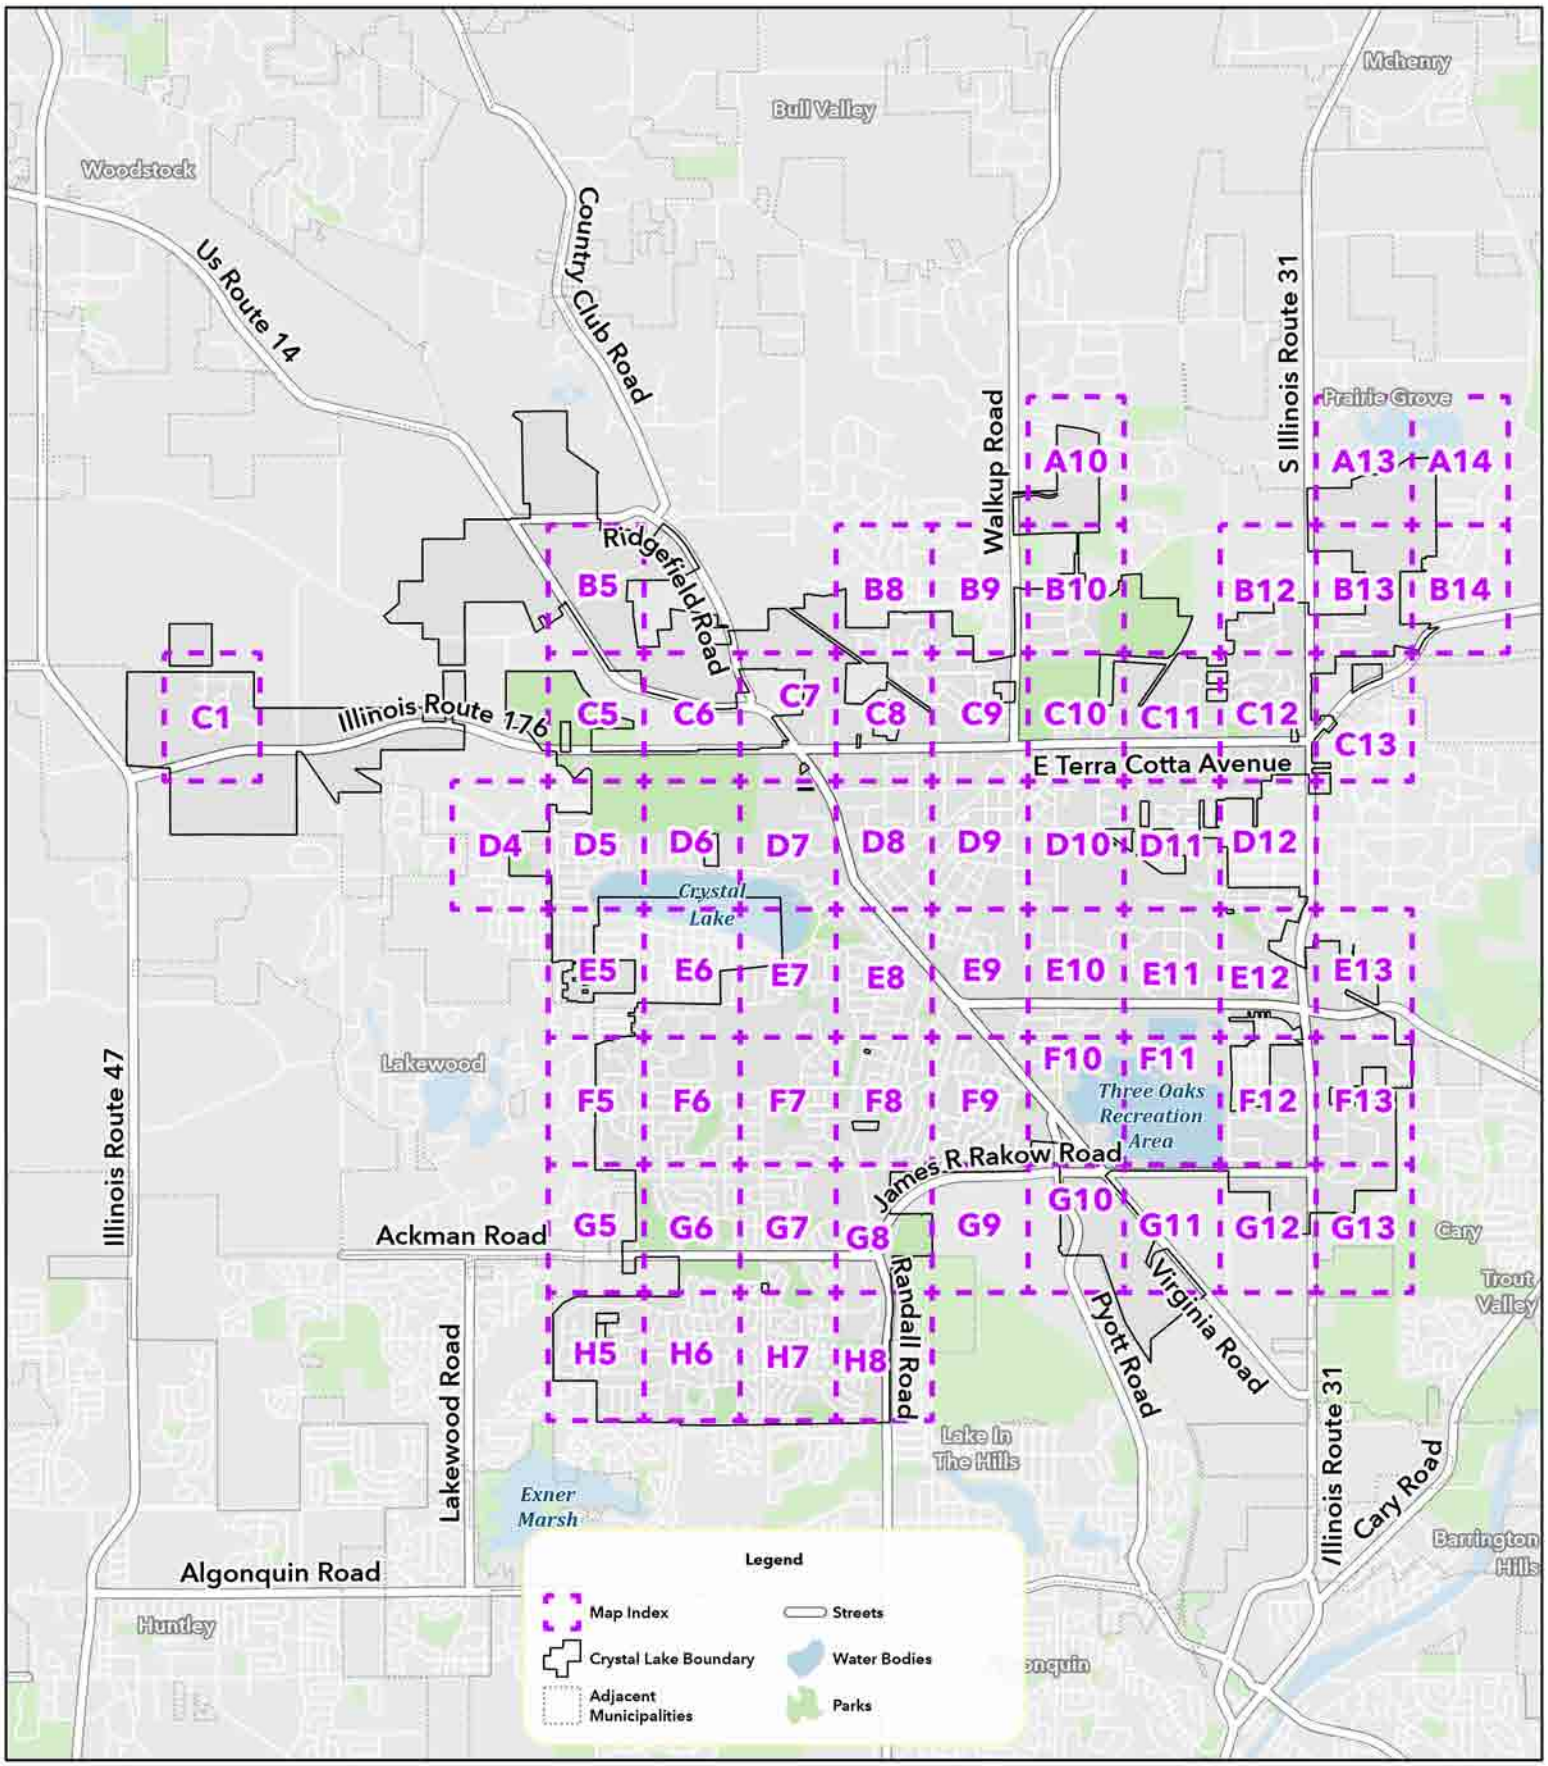

Important Flushing Information After Lead Service Line Replacement

Flushing instructions after lead service line replacement:

- The service line should be flushed once the line is reconnected to the main and prior to use by the customer.
- Plumbers should flush the water inside the home, closest to where the service line enters the structure, immediately following a lead service line replacement.
- The cold water should be run for at least 30 minutes at full flow after removing the faucet aerator. The purpose of this flush is to remove any debris resulting from the replacement process that might contain lead.
- Customers or the plumbers should also flush the interior plumbing after a lead service line replacement. Beginning in the lowest level of the home, they should remove faucet aerators and fully open the cold water taps throughout the home, letting the water run for at least 30 minutes at the last tap. Then they should turn off each tap starting with the taps in the highest level of the home.

*Please enter information in the empty box next to each section	Water System Name	Crystal Lake	System ID Number:	IL 1110150	Current Inventory Date:	3/28/2025	
*Please enter totals in the empty box next to each category	Total Service lines:	13787	Total Lead:	517	Total Non-Lead:	12118	Total Galvanized Requiring replacement:	43	Total Unknown:	1109	Website link to Material Inventory:	https://www.crystallake.org/home/showdocument?id=24089&t=638792687172748240

Service Address	Lead and Copper Sample site number.	Is this a high-risk Facility or Area?	Service Line Newly Identified Since Last Submitted Inventory	Year PWS-Owned Service Line was Installed	Year Customer Side Service Line was Installed	Source of Information Used for Service Line Identification	Gooseneck/ Pigtail	PWS-Owned Service Line Material	Customer Side Service Line Material	Classification for Entire Serivice Line	Was Galvanized Service Line Material ever downstream of Lead?	Date Customer Notified of Lead Service Line	Was a Lead Service Line Previously Replaced at this Location?	Date Lead Service Line Replaced	Material of Service Line Replacement	Has the customer refused access to the property?	Date of customer waiver or IDPH notification, if customer refused access to property
	Lead and Copper Sample site number is the 7 digit number starting with "LP" or " LA". / If address is not a lead and copper sample site mark "N/A"	EXAMPLES: Group Homes, Parks, Playgrounds, Special Care Facilities, Hospitals, Clinics, Child Care Facilities / Yes (Y) or No (N)	Yes (Y) or No (N)	What year was the PWS-Owned service line installed, if known?	What year was the customer side service line installed, if known?	How was the Material of this Service Line Identified? EXAMPLES: Construction Records, Visual Inspections, Survey Response, Maintenance Records, etc...	EXAMPLES: Copper - No Lead Solder (C); Copper - Lead Solder (CLS); Galvanized (G); Lead (L); Cast/Ductile Iron or Transite (Q); Plastic - PVC, HDPE, PEX (P); Unknown (U); Unknown Not Lead (UNL)	EXAMPLES: Copper - No Lead Solder (C); Copper - Lead Solder (CLS); Galvanized (G); Galvanized Requiring Replacemnt (GRR); Lead (L); Cast/Ductile Iron or Transite (Q); Plastic - PVC, HDPE, PEX (P); Unknown (U); Unknown Not Lead (UNL)	EXAMPLES: Copper - No Lead Solder (C); Copper - Lead Solder (CLS); Galvanized (G); Galvanized Requiring Replacemnt (GRR); Lead (L); Cast/Ductile Iron or Transite (Q); Plastic - PVC, HDPE, PEX (P); Unknown (U); Unknown Not Lead (UNL)	EXAMPLES: Lead (L); Galvanized Requiring Replacemnt (GRR); Unknown (U); Non-Lead (NL)	If any galvanized service line material was ever downstream of a Lead section, mark Yes (Y). If the galvanized service line material was never downstream of any Lead section, mark No (N). / If Yes, that section of service line should be marked as Galvanized Requiring Replacement in the appropriate immediately preceding column(s).	Enter date customer was notified of Lead Service Line. / If Service Line is not Lead put N/R	Yes (Y) or No (N)	If previous column was marked (Y), provide date the Lead Service Line was replaced. / Leave blank if previous column was (N).	EXAMPLES: Copper - No Lead Solder (C); Galvanized (G); Plastic - PVC, HDPE, PEX (P); Cast/Ductile Iron or Transite (Q) / Leave blank if no Lead Service Line was replaced.	Yes (Y) or No (N)	IF customer refused access to property, date waiver obtained by PWS or date PWS notified IDPH of refusal to sign waiver. / Leave blank if customer has not refused access.
