CAN THE INDOOR POOLS BE REPURPOSED?

Community-use indoor pools should be purpose-built to meet community needs.

EXISTING AQUATICS ELEMENTS

- LAP POOL
- THERAPY POOL
- HYDROTHERAPY POOL
- NEW HYDROTHERAPY POOL
- LEISURE POOL

The question is not only whether parts can be repurposed. It is whether the existing aquatic spaces fit Crystal Lake's long-term capacity, accessibility, programming, and operating needs.

COMMUNITY NEED	EXISTING FIT	IMPLICATION
Target capacity = 25-yard, 6-8 lane lap pool + recreational pool	**Limited scale and specialized layout**	**Community use public aquatics would require a different size and layout**
Flexible community use & programming	**Existing pool areas serve a focused purpose**	**Reuse will limit space for other community use functions**
Cost effective long-term operational expenses	**Multiple pools and systems**	**Staffing, utilities, and maintenance need careful study**

COMMUNITY QUESTION

If aquatics are studied in the future, what should matter most: capacity, programs, flexible use, or long-term operational costs?

WHAT THIS MEANS

The existing indoor aquatics complex is not a good long-term fit for a community-center strategy.
